1 INSERT THE FOUR TOP CORNERS

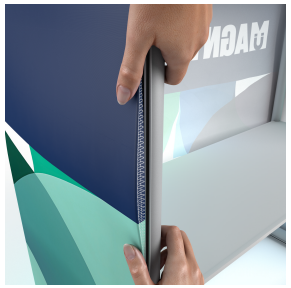

Wrap the graphic around the counter and insert the silicone edge into each of the four rear corners.

2 INSERT THE REAR UPRIGHT EDGES

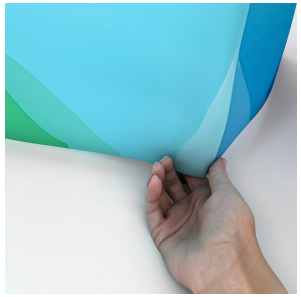

Working from the top/bottom, push the silicone edge into the channels, working towards the middle, along both rear uprights.

3 INSERT THE TWO FRONT BOTTOM CORNERS

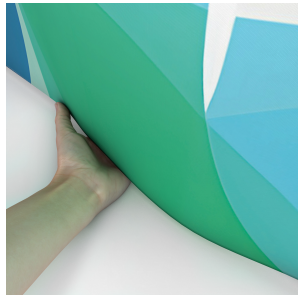

Pull the graphic gently around the counter and secure the silicone edge into both front bottom corners.

4 INSERT THE BOTTOM GRAPHIC EDGE

Work around the bottom of the counter, pushing the silicone edge fully into the frame channel.

5 INSERT THE TOP GRAPHIC EDGE

Finish by working around the top of the counter, inserting the remaining silicone edge into the frame channel starting at the corner points, then along the edges.

1 **Two-person installation recommended for best results,especially for larger counter configurations.**

2 **Work evenly around the frame and avoid pulling too much tension into one area. This will help create a smooth, wrinkle-free finish.**

3 **Follow the same installation process for all MAGNTEX® counter sizes and configurations.**
